PL6

Student name: Diogo Saldanha

ID student: 2022232761

PL6

Perceptions

P1 (Landed): Both legs are in contact with the ground

P2 (Falling_Fast): Velocity is below the safety limit

P3 (Tilted_Left): Ship is tilted to the left

P4 (Tilted_Right): Ship is tilted to the right

P5 (Missed_Left): It is to the left of the left flag

P6 (Missed_Right): It is to the right of the right flag

Actions

A1 (Turn_Off_Engines): Do not apply force

A2 (Main_Engine): Activate the main engine and apply force against gravity

A3 (Rotate_Right): Activate the left engine, rotating the ship to the right

A4 (Rotate_Left): Activate the right engine, rotating the ship to the left

Production System

If P1 -> A1 (If landed, turn off engines)

If ~P1 && P3 -> A3 (If not landed and tilted to the left, rotate to the right)

If ~P1 && P4 -> A4 (If not landed and tilted to the right, rotate to the left)

If ~P1 && ~P3 && ~P4 && P2 -> A2 (If horizontally stabilized but falling fast, activate the main engine)

If ~P1 && P5 -> A3 (If drifting to the left, rotate slightly to the right so the main engine pushes it back to the center)

If ~P1 && P6 -> A4 (If drifting to the right, rotate slightly to the left)

If nothing -> A1 (Angle is fine and velocity is fine, turn off engines)
